KeyShot 9

## TOP NEW FEATURES

Denoise

Now included in the Basic and Photographic Image Styles is a deep learning Denoiser that allows you to reduce noise in the real-time view and render output to achieve smooth results in less time.

OFF   ON

GPU Mode

GPU ray tracing in KeyShot 9 means you are now able to take advantage of NVIDIA RTX GPUs to render in the real-time view and for local render output. The main benefit of GPU support is for local performance scaling. Unlike CPUs, it is relatively easy to add a 2nd or 3rd GPU to your machine to gain performance. GPU ray tracing in KeyShot 9 supports the NVIDIA Maxwell microarchitecture found in GTX 980 and above.

3D Model Library

Adding context and detail to your scene is easier than ever with Models now available on the Cloud Library. Download them straight into your KeyShot Library and add to your scene.

Fuzz Geometry Shader

Add softness to your materials with the new Fuzz geometry shader.

RealCloth ™

This powerful new material type allows you to visualize realistic woven materials with control of the weave pattern (Pro) and ability to add flyaway fibers.

OTHER NEW FEATURES

- Contour Procedural Textures
- Generic BRDF Material
- Browzwear VStitcher Plugin
- Substance Painter Material Import

- Animation Ease Curve (PRO)
- Curve Fade Animation (PRO)
- Web Configurator (KeyShotXR)
- Parallel Jobs (Network Rendering)
